

Press release 24 March 2010

Ålö awarded with Grand Prix for the new control system LCS

Ålö has been awarded with a prize, the Grand Prix, for the new loader control system, LCS, at the large agricultural show Techagro 2010, one of the largest agricultural machinery shows in Europe, that takes place in Brno, Czech republic this week.

The new loader control system combines several major technical achievements into one system that gives the user a new level of control, usability, effectiveness and safety. The system also saves time, money and the environment by enabling quick and easy handling of the couplings, by eliminating unnecessary oil spillage when attaching and detaching the hydraulics and by assisting with lower fuel consumption.

The core technical components are:

- A dedicated valve programme specifically designed for the demands and functions of modern front loaders
- A uniquely designed and integrated flat face multi-coupling
- A new, thumb-steered electronic joystick for easier handling

– I am very glad that our new loader control system is getting international attention. We have invested many hours of research and development into finding a good solution for tomorrows' front loaders, says Urban Hadarsson Sales & Marketing Director at Ålö

The new LCS system of Ålö has already been awarded with an AE50 award in North America in January 2010.
